**Women's
Constipation,
Who Knew?**

Women's Constipation, Who Knew?

There's constipation, and then there's women's constipation. True, the female and male gastrointestinal system are identical, but it's the neighbours of the female gastrointestinal system that cause a problem. When looking at female constipation and bloating it's impossible, even reckless, to disregard the rest of the Female Pelvic Region.

When a woman's gut health is compromised she is at risk of an overproduction of estrogen. Where estrogen in males is predominantly linked to libido and sperm maturation, in women it affects many crucial functions outside of reproduction - heart health, bone health, and brain health, to name the big three.

So why do we treat constipation as though it is a gender neutral, one size fit all, issue?

THE RAW NUMBERS

300%
more women

are likely to suffer from gastrointestinal problems next to their male counterparts.

Women are
6 times

more likely to suffer from IBS. The movement of a world where women are trying to have it all creates an impossible stress on the body. Coupled with erratic hormonal changes, women are uniquely placed to suffer from IBS.

100%
of women
experience
menstruation
(almost).

This one seems obvious, but the havoc that menstruation, and menstrual issues plays with the ultra sensitive ecosystem of the gut is a huge factor when it comes to gut health.

FUN FACT

The female intestine is 4 inches (10 centimeters) longer than a male intestine. Although this may not directly affect digestion, it is just one example of how our physiognomy differs, even in seemingly gender neutral organs. So, size does matter.

What Makes **DIGESTLIVE™** So Effective?

Our unique formula works in tandem with the female body to create a massage-like motion inside their digestive system and gently stimulates the colon and gut. Women can take DIGESTLIVE™ regularly post-surgery to work against constipation, bloating and gas symptoms before they start.

How does this differ from other options?

03

Lifestyle, Hormones, and Gut Health.

There aren't many of us that are on a solid schedule, whether it be sleep, eating, or exercise. None of us, bar none, are impervious to stress. In short, our worlds were not designed to be kind to the gut.

Vitamin and mineral deficiency coupled with probable lack of sleep, lead to a disturbance in hormonal and bacterial balance.

Instead of working on combatting daily external factors, the body has to work overtime to provide the basics.

Digestives made from synthetic chemicals aim to irritate the bowel and the bowel only.

While this may clear the gut of uncomfortable constipation, it can also lead to myriad other problems.

The sudden movement in the body caused by synthetic chemical digestives can result in permanent muscle damage in the rectum. It can also disturb the delicate balance of microbiome living in the female pelvic region. This rich collection of different bacteria is critically responsible for hormonal balance.

Other herbal options aim to target the symptoms while ignoring the underlying issues. This limits us to treat the problem only once they have already reared their ugly head.

Both these options are harsh on the system, stripping it of its natural process, and we end up right where we started.

So how does DIGESTLIVE™ break the cycle?

04

Our Unique Proprietary Blend and It's Place in a Busy Market

The nervous system controls the digestive system. When the body is under stress, it triggers the fight or flight response. This response slows digestion, increases stomach acid, and causes spasms or pain in the gut.

The last thing the body needs during recovery is the added stress of gastrointestinal strain.

With this in mind, DIGESTLIVE™ goes above and beyond other herbal digestives.

The proprietary blend is full of goodness and gives women peace of mind during recovery.

05

THE ANTI-ANXIETY ALL-STARS THAT MAKE DIGESTLIVE™ THE
ULTIMATE SUPPORT FOR FEMALE CONSTIPATION.

RHODIOLA ROSEA

Rhodiola can be used to reduce stress, combat fatigue, increase mental performance and improve physical and mental fitness and resilience.

ASHWAGANDHA

This ancient adaptogenic herb has been used for over 3000 years for managing stress and anxiety. Unmanaged stress directly affects digestive function.

HOPS

It contains powerful flavanones, specifically isohumulones and 8-prenylnaringenin that are beneficial for overall well-being. Hops is frequently called upon to reduce inflammation and insulin resistance.

SKULLCAP

Historically referred to for issues of insomnia, diarrhea or respiratory infections by alternative medicine practitioners for over 2000 years; It has a high concentration of flavones, which are bioactive compounds with pharmacological functions.

DIGESTLIVE™ goes above and beyond your average herbal digestive, because you are above, and beyond.
